During the Spring Season, starting about March 15th to 20th, we use two entire floors for the display of Nursery Stock, Potted Plants, Bedding Plants, Bulbs, etc., so that you may select your own stock and see what you are buying, avoiding the great risk you assume when ordering stock from out-of-town nurserymen.

We have three cellars stocked with all kinds of Fruit Trees, Ornamental Trees, Small Fruits, such as Raspberries, Gooseberries, Currants, etc.; Rose Bushes, vast assortments of Flowering Shrubs, Privet and Barberry Hedge Plants, Peony Roots and Summer Flowering Bulbs.

We have expert Nurserymen in charge of these cellars, so that stock is not allowed to become dry and worthless. Every plant is well mossed and the best of care used to keep the stock in good condition.

We know our customers will be pleased with this opportunity to be able to call on their way home from business and select what they need and carry it home to be planted the same day they receive it, thereby insuring success.

MACNIFF'S SPECIAL SPENCER MIXTURE SWEET PEAS

SWEET PEAS

GIANT ORCHID-FLOWERED, OR SPENCER SWEET PEAS

This type of Sweet Peas, variously called "Orchid-Flowered," "Spencer" and "Waved" Sweet Peas, is for most uses a great improvement on the "Grandiflora" type. The Vines are very robust and tall; the wavy-petaled flowers are large and three or four often are borne on each of the very strong stems.

This collection of Sweet Peas is composed entirely of the large-flowered Spencer types. The making up of this mixture has been performed under entirely careful supervision.

This is an unsurpassed mixture of sweet Peas.

MACNIFF'S "SHADY GLEN" LAWN GRASS SEED

It is hardly necessary to remind any reader of this catalogue of the futility of using ordinary grass seed mixtures for shady and damp situations. Many lawns are spoiled by the bare and unsightly spot where constant shade exists, and all efforts have failed to get grass to grow in these places.

To successfully combat conditions such as these, **MACNIFF'S "SHADY GLEN" LAWN SEED** should be used exclusively.

This combination is composed of tried and tested fine-leaved evergreen varieties, which grow wild in the woods in their natural state, and will form a lawn that will be in keeping with the finest results obtainable under ordinary conditions.

MACNIFF'S HAY GRASS MIXTURE

MERITORIOUS GRASS MIXTURES FOR HAY AND PERMANENT PASTURES

Conditions are so varied that in presenting to our patrons grasses that will give universal satisfaction, for hay and permanent pasture, we have devised a number of high-grade mixtures. It is conceded by all reliable authorities on this subject that a heavier, thicker and more reliable growth can be obtained from a formula composed of many grasses, than by only one or two varieties. We also must take into consideration which varieties are particularly adapted by nature to meet climatic conditions and local situations. Some sorts thrive unusually well on high ground, with hot, dry weather, while others are best in low, moist situations. In view of these facts, it is apparent that great care must be taken in the selection of the proper seeds.

- For Hay Only—Will give immense Hay Crop.
- For Hay and Permanent Pasture for Heavy Soils.
- For Hay and Permanent Pastures for Light Soils.
- For Pasture Only—Can be cropped very close without injury.
- For Hay and Permanent Pasture for Medium Soils.

Price, Bushel, 14 lbs., \$6.00; 100 lbs., \$40.00

PERMANENT CLOVERS

It is very important that Clovers should be sown with Grasses, as they add to the yield of hay and pasture, and correct atmospheric nitrogen and store it in the root nodules. Clover seed should be sown in the Spring Season separately. Ten pounds Permanent Clover should be sown per acre.

Price of Mixed Permanent Clover, 50c per lb.; \$45.00 per 100 lbs.
